

Raingentic hackathon starter kit

Issue a scoped card, run a transaction, move money across rails. Sandbox only, so nothing here moves real money.

Sandbox only

Never a production key in an agent prompt.

Read

Call

api-dev.raincards.xyz/v1

Ask

Keys at the workshop desk

Api-Key. Authenticates every request.

userId. Cardholder you issue to.

teamId. Scopes list endpoints.

contractId. Collateral you fund.

Quickstart

1 Fund your collateral

```
POST /simulate/collateral/fund
{ contractId, currency: "rusd", amount: 100000 } //
cents
```

2 Issue a scoped card

```
POST /issuing/users/{userId}/cards/scoped
{ amountInUSDCents: 4299 }
```

Needs a sessionId header. Keep the returned id as your cardId.

3 Authorize, then settle

```
POST /simulate/transactions/authorize
{ cardId, amount, currency, merchantName,
merchantCategoryCode }
POST /simulate/transactions/{id}/settle
```

4 Read the transaction back

```
GET /issuing/transactions?limit=20
```

5 Move money across rails

```
POST /payment-routes
{ userId, source, destination }
POST /simulate/payment-routes
{ paymentRouteId, amount }
```

Guardrails

Sandbox keys only. Rotate what you demo.

No real personal data in test cardholders.

Rain is a Visa and Mastercard Principal Member, not a bank.
